DEKAL LOAD BANKS

Slovenia

Hall A6, Stand 762

Company Profile

Press Releases

Company Profile

DEKAL LOAD BANKS is the only European manufacturer of load banks and power analyzers for Ground Power Units (GPU). We are specialized in development and production of 400Hz and 28.5V DC load banks, power analyzers and accessories.

Since the launch of the first load bank, our development efforts were concentrated on rethinking the simple load bank into a precise and powerful measuring instrument.

By now, our load banks are the only products on the market of its kind to offer a complete power analysis.

Our lead times are short, furthermore the company guarantees minimum stock levels in case of emergency supplies.

We are proud to be the preferred load bank supplier approved by major airlines, ground handlers and GPU manufacturers worldwide.

Products & Services

DEKAL LOAD BANKS are the quality choice when it comes to ensuring the right power supply from the GPU.

Primary features include:

- GPU testing and adjustment under different electric loads as a part of preventive maintenance and after service repairs
- Diesel engine decarbonization: possibility to run the GPU at full load for an extended time period, required to keep the engine's original performance
- Simultaneous measurements of Volts, Amperes, kW, kVA, Hz and cosp for each phase
- Digital measurement data acquisition (USB & Wi-Fi) with measurement report printout
- Simple operation, suitable for non-trained personnel
- Protective carrying case with wheels and pull-up handle for easy transportation
- Rugged design
- Quiet operation

inter airport Europe Product Categories

- || Ground support equipment and services
- || Aircraft handling
- || Power supplies
- || Other ground support equipment (GSE) and services
- || Aircraft maintenance
- || Maintenance systems (e.g. scaffolding, test stands)
